FOR IMMEDIATE RELEASE

Rogue Valley Sewer Services Plan for Sewer and Stormwater Services

Rogue Valley Sewer Services has suspended sewer billing for all properties destroyed by the recent fire.

RVSS will soon begin capping sewer service laterals to properties that were destroyed by the recent fires. We will cap the service and install a cleanout within 5 feet of the property line. This work is necessary to prevent debris from entering the sewer and to ensure that the sewer is available and functional when owners want to reconnect.

Property owners can reconnect the sewer at this location when they rebuild.

Property owners will need to obtain a sewer permit from RVSS to reconnect. Property owners will receive credit against system development fees for the uses on the property before the fire.

More intensive developments, such as commercial or multi-family projects, will be subject to normal plan review and design requirements. Depending on the size and scope of the project a stormwater management plan may be required
